

Assemblies Affected: Universal Dragon Software on Windows Vista

Symptom: Unable to edit, add, or remove entries in Universal Dragon Palette due to a corrupted BCI file.

Solution:

- 1) With Universal Dragon closed, delete all files in the **C:\ProgramData\Xantech Corporation\Universal Dragon\2.3** folder (bci.mdb and bci.bak)
- 2) Download a clean version of the BCI file at <http://www.xantech.com/bci.mdb> and save it to the **C:\ProgramData\Xantech Corporation\Universal Dragon\2.3** folder.
- 3) Restart Dragon and in edit mode you should now be able to edit, add, and remove entries.
