TOUCHSCREEN CONTROLLERS**

SPLCD64V

Xantech SPLCD touchscreen controllers are the perfect combination of form and function, blending the elegant simplicity of a touchpanel controller with the power to control virtually every major system in the home: entertainment system, lighting, security, heating and air conditioning, and more. SPLCD touchscreen controllers provide an easy-to-understand, simple-to-use presentation that eliminates rows of confusing buttons and the clutter of multiple wall panels throughout the home.

SPLCD touchscreens are available in four distinct versions in three different sizes, 3.9", 5.7" and 6.4", so it's never a problem to find just the right panel for the job. The SPLCD64V with video capability gives the option of Picture-in-Picture and full-screen video display. This gives you the ability to control and monitor security cameras and more, directly from the touchscreen. Screen graphics are fully customizable for the perfect control layout, and to match your unique taste.

Xantech SPLCD touchscreen controllers make it easy to be in control.
